THE RESULT OF ULTRASONOGRAPHY EXAMINATION

Mrs Ewa Kołodziej

09.08.2004

Thyroid gland USG – the thyroid gland enlarged within the whole region, the size is:

The right lobe about 70x35x30 mm – within it - two hyperechogenic nodules of size about 20 and 30 mm.

The left lobe about 55x25x23 mm - in the central region one hyperechogenic nodule of size 10mm

Thickness of the isthmus 8 mm.

Thyroid gland USG
Mrs Kołodziej Ewa age: 56

The right lobe 42x29x52 mm. The left lobe 18x23x48 mm. The isthmus – 12 mm

The left lobe – a homogenous parenchyma.

The right thyroid lobe heterogeneous – visible two hyperechogenic focal lesions of 10 and 8 mm in diameter.

The cervical lymph nodes are not enlarged.
