

The result of USG examination of thyroid gland

8.05.2003

Nowak Barbara Age: 67

The thyroid gland enlarged, the size is: right lobe – 63 x 28 x 28 mm with a hypoechogenic point of size 24 mm in the central region and with hyperechogenic point of size 20 mm in the upper region. Left lobe of size about 88 x 53 x 37 mm, retrosternal, with multilocular cyst in the central region (the largest ventricle 27 mm). The surrounding cervical lymph nodes are not enlarged.
